

Data collection

- 1- When your team started, how did your team decide what to annotate and how to annotate it?

When we first started we annotated information that we believed to be important or relating to the crimes in general.

- 2- How did CAnalytics help or hinder your team in annotating data?

CAnalytics helped by giving us a single platform to use. However it hindered us because we could not organize the information how we wanted to, we had to scroll all of the data, and we could not delete information as the investigation went on.

Data analysis

- 3- How did CAnalytics help or hinder your team in finding relationships of importance between entities?

The same form answer 2.

- 4- How did CAnalytics help or hinder your team in finding evidence to eliminate suspects?

It helped by giving us the ability to collaborate on one platform.

Hypothesis development

- 5- How did you develop hypotheses as a team using CAnalytics? If your team had never created a hypothesis in CAnalytics, explain why your team did not believe the function be helpful.

As we went throughout our work we noted any important information and relationships that we found in the raw data to create hypotheses.

- 6- Think of a time when your teammate shared a hypothesis in CAnalytics, how did you respond?

I read through the hypothesis and used that to form my answers to the questions.

Coordination

- 7- Give an example of how CAnalytics helped you stay aware of your teammates' activities

While going through my work I saw updates as to what my team was working on.

- 8- Give an example of when you had a problem coordinating with your team when using CAnalytics

The problem was communication. CAnalytics didn't allow us to properly communicate what and why we did what we did. So it was hard to figure what and why things were happening.

- 9- How does your experience with your team differ when you were using CAnalytics versus your prior information analysis experience (e.g. when using Analyst's Notebook, PARC ACH, Google Doc)

I think it was better the other times because we used hard copies and it allowed us to delete information as we saw fit. However CAnalytics would be useful for a situation that is rapidly changing and is not stagnant.

- 10- Did you use any other tools in the project (e.g. Google Doc, Groupme, Analyst's Notebook, PARC ACH)? List any tools you used in addition to CAnalytics and describe what you used them for.

I printed out some of the information sheets and wrote down information I thought was important so I could keep it organized and could easily eliminate information.
