Michael Casner

Data collection

1- When your team started, how did your team decide what to annotate and how to annotate it?

We sort of all just started and helped out. We went down and each took one and kept going until they were all done.

2- How did CAnalytics help or hinder your team in annotating data?

It helped because we could each see what our partners or teammates are also doing.

Data analysis

3- How did CAnalytics help or hinder your team in finding relationships of importance between entities?

It was easy to see the relationships because of the visual help it provided us.

4- How did CAnalytics help or hinder your team in finding evidence to eliminate suspects?

It was easy because we could easily see who was a suspect and who wasn't due to the diagrams it showed.

Hypothesis development

5- How did you develop hypotheses as a team using CAnalytics? If your team had never created a hypothesis in CAnalytics, explain why your team did not believe the function be helpful.

We did not really understand how to do it, so we did not make one. We simply used logic and the diagrams to help us figure things out.

6- Think of a time when your teammate shared a hypothesis in CAnalytics, how did you respond?

I didn't really respond to it because we did not make one.

Coordination

7- Give an example of how CAnalytics helped you stay aware of your teammates' activities
We could see what our teammates were doing at the present time so this helped us see if they were actually doing work or not.

8- Give an example of when you had a problem coordinating with your team when using CAnalytics
Sometimes it was buggy and it lagged so we could not see but we were sitting beside each other so that helped a lot.

9- How does your experience with your team differ when you were using CAnalytics versus your prior information analysis experience (e.g. when using Analyst's Notebook, PARC ACH, Google Doc)
It was collaborative, so we were all on the same application at the same time. On the other ones, we were on our own application on different computers so it was more inclusive.

10- Did you use any other tools in the project (e.g. Google Doc, Groupme, Analyst's Notebook, PARC ACH)? List any tools you used in addition to CAnalytics and describe what you used them for.
We used GroupMe to communicate outside of class and to see what the others were doing and their progess.
